

MMCP Collaboration

Education capacity building through Postgraduate studies

Student support is an important component of MMCP Collaboration, with postgraduate students able to carry out high-quality research at a reasonable cost and make an important contribution to the development of aquatic research capability. Student support was provided through the provision of competitive (merit-based) PhD 'top-up' scholarships, which was advertised nationally and internationally to attract suitably qualified candidates. These positions were at either the Albury-Wodonga or Bundoora campuses of La Trobe University.

Lorena Nogueira

Completion date: 2019

Supervisors: Amina Price¹, Susan Lawler¹, Paul Humphries² and Lee Baumgartner²

Water infrastructure and challenges for fish conservation: A trait-based analysis to foresee fish recruitment in regulated rivers

Objective:

Improve the understanding of larval dispersal in three Australian freshwater fish Golden perch (*Macquaria ambigua* Richardson), Murray cod (*Maccullochella peelii*), and Trout cod (*Maccullochella macquariensis* Cuvier, 1829), by investigating ontogenetic shifts in swimming behaviour under a range of simulated flow conditions.

Completion date: 2020

Supervisors: Ewen Silvester¹, Gavin Rees³ and Aleicia Hollands¹

Impact of environmental stress on the protein and amino acid composition of freshwater organisms

Objectives:

- ⇒ Explore the variation in the amino acid composition of macroinvertebrate taxa collected from seven sites along the Murray River, Australia.
- ⇒ Investigate how metal contamination within river systems alter the amino acid composition of freshwater organisms.

Manisha Skakya

Further information

MMCP Collaboration (MMCP) is a project supported by the Joint State Governments and the Murray-Darling Basin Authority to generate and adopt freshwater ecological knowledge through collaboration, to maintain research capability and contribute supporting science to underpin the Basin-Wide Watering Strategy.

MMCP Collaboration Final report: doi.org/10.26181/5d19927544b20

Thesis will be available on completion: [Online repository](#)

Francesco Colombi

Completion date: 2020

Supervisors: Ewen Silvester¹

Legacy effects of historical gold mining on floodplains of Victorian rivers

Objectives:

- ⇒ Investigate the characterization of the physical and geochemical changes that occurred in mine tailings after re-deposition on downstream floodplains and comparison of these tailings with the (relic) underlying floodplain sediments.
- ⇒ Understanding the chemical form of the re-deposited tailing in order to evaluate their potential bioavailability and environmental fate in these deposits of freshwater organisms.

Completion date: 2021

Supervisors: Nick Murphy⁴, Katherine Harrisson⁴ and Zeb Tonkin⁵

Flows for fish: Using water flow to promote connectivity, recruitment and genetic diversity for Australian fish species

Objectives:

- ⇒ Use population genomic information to investigate the current state of population structuring and connectivity in four key Australian fish species, Common galaxias (*Galaxias maculatus* Jenyns, 1842), tupong (*Pseudaphritis urvillii* Valenciennes, 1831), Australian grayling (*Prototroctes maraena* Günther, 1864) and Murray cod (*Maccullochella peelii*).
- ⇒ Provide a detailed genomic exploration of breeding and recruitment dynamics of Murray cod populations and their interaction with river flow.

James O'Dwyer

Lucas Goncalves Morais

Completion Date: 2021

Supervisors: Aleicia Holland¹ and Ewen Silvester¹

The influence of water chemistry on zinc bioavailability and toxicity in Australian freshwaters

Objective:

- ⇒ Collate water quality data from across Australia to determine median, 10th and 90th percentiles for pH, DOC and hardness within each state and territory.
- ⇒ Exposing the microcrustacean *Ceriodaphnia dubia*, to Zn^{II} in artificial and natural freshwaters, simulating realistic ranges for: DOC, hardness and/or pH in Australian rivers, to determine how changes in water chemistry will influence Zn^{II} toxicity to this aquatic organism.
