CHAPTER 1. INPUT CONVENTIONS

Convention	Description
screen	Monospace fonts show values (for example, of file-name references)
boldface	Boldface text indicates key terms
<i>italics</i>	Italic text indicates a system variable.
→	→ indicates a process.

Table 1.1: Conventions

The collection contained herewith is one of the outputs of a project funded by the **Australian National Data Service (ANDS)** as one of the **Major Open Data Collections (MODC)** funded nationally for partner institutions to publish nationally and internationally significant datasets, as fully open data.

La Trobe University Library (LTU-Lib) partnered with our Health Sciences Faculty (**LTU-HS**) to procure data sets from two Victorian regional health service providers in 2014/15 – **Loddon Mallee Murray Medicare Local (LMMML)** and **Bendigo Health Hospital (BHH)** – and from these created publically available, healthy communities data collections for research purposes. The data sets from both health providers (BHH and LMMML) cover patient data for the years 2005-2014. The intent was to combine these data sets with data from other sources (**Australian Bureau of Statistics (ABS)**, **Australian Institute of Health and Welfare (AIHW)**) to produce a single, unified collection – as depicted in Figure 2.1. Constraints of time under conditions of having to be meet strict ethical requirements meant that the two main data sets procured from **LMMML** and **BHH** could not be joined. As a result, the data-sets have had to be published as separate collections; one covering the **LMMML** data, the other – described in this document – covering the **BHH** data.

Despite not being able to combine **BHH** and **LMMML** data-sets, each *have* been com-

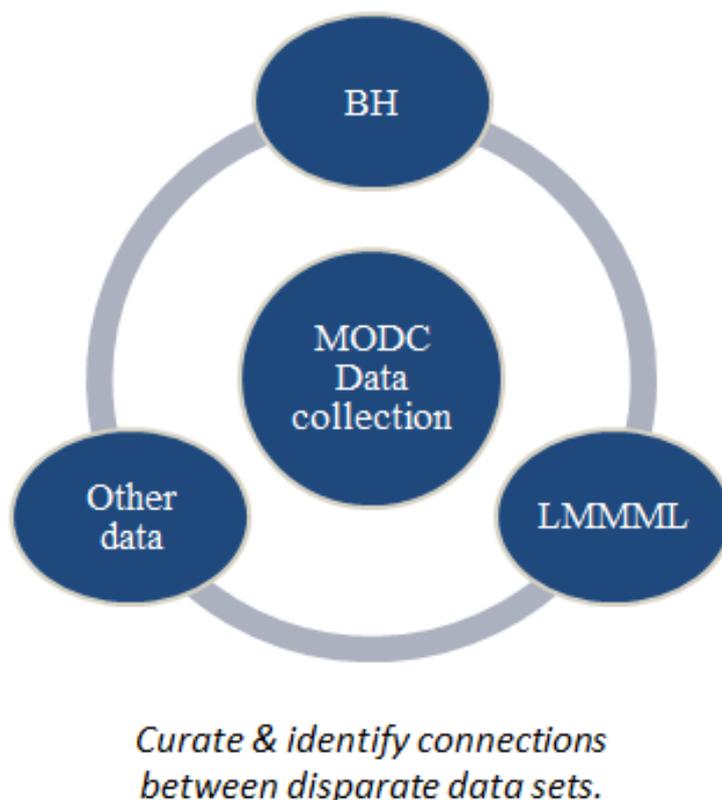

Figure 2.1: Model for MODC Data Collection

bined with other data to substantially enrich what is available to researchers for querying on. Processes required for processing and combining the raw data sets into their publishable endpoints have also been fully scripted, thereby easing the task of combining **BHH** and **LMMML** data-sets in the future.

BHH data records include **Statistical Local Area (SLA)** codes and these have been linked to **ABS**–socio-economic data. **BHH** records also include **Australian Refined Diagnosis Related Groups (AR-DRG)** codes, which have been linked to **AIHW**-data to obtain descriptive information about the codes and for the purpose of aggregating the data.

To meet the requirement that the data be anonymised, it was filtered by age (Year-Of-Birth between 1925 – 2005) and sex (Male or Female). The **Australian Refined Diagnosis Related Groups (AR-DRG)**-classification for each record was then aggregated to the coarsest level (**Major Diagnostic Category (MDC)**) and all dates rounded-down to the nearest 5-year value. Finally, aggregated counts for each category of classification – **Diagnosis_Group** (`bh_drg_group`), **Admission_Type** (`bh_admission_type`), **Care_Type** (`bh_care_type`), **Length Of Stay** (`bh_length_of_stay`), **Separation_Method** (`bh_separation_method`) and **Source_Of_Admission** (`bh_source_of_admission`) – were calculated and those **Patient_Episode** records were deleted where represented in any category having less than 50 records in total.¹

After filtering, 40,237 records remained of the 48,215 raw data records received from **BHH**. These 40,237 records were normalised into a re-configured main table (**Patient_Episode** (`bh_patient_episode`)) and (above-cited) look-up tables.

Chapter 3 details the main entities and relationships comprising the **BHH** collection.

Chapter 4 gives an inventory of the files in the **BHH** collection.

Chapter 5 describes and enumerates the contents of the derived look-up tables present in the collection and describes the the linking relationships between the main **BHH** table and these look-up tables.

Chapter 6 details table column definitions for all columns in all tables in the **BHH** collection, along with descriptive information about the meaning of each column.

Chapter 7 gives summary tables of **Patient_Episode** record counts grouped by each category of classification.

Chapter 8 provides an example of running a query against the **BHH** collection.

Appendix A gives data processing details.

Appendices B and C gives details of the source, acquisition and preparation of **ABS** and **AR-DRG** data, respectively.

Appendix D lists contents of all **SLAs** linked to by the **BHH** data.

Appendix E lists log output of the processes run to generate published data from the raw data as received from **BHH**.

¹The only location information present in the **BHH** raw data received was the **SLA**. (Unlike the **LMMML** raw data) this was deemed already sufficiently aggregated not to require further processing.

CHAPTER 3. SUMMARY OF THE COLLECTION

Figure 3.1 is an Entity–Relationship diagram for the main entities and relationships comprising the Bendigo Health data collection:

- **Patient_Episode** (bh_patient_episode)
- **Diagnosis_Group** (bh_drg_group)
- **Location** (bh_abs)

Table names corresponding to entities described are given in parentheses.

Table 3.1 describes the main linking relationships between the BendigoHealth database tables.

Contents of all Diagnoses Groups linked to by Patient_Episode are listed in Table 3.2.

Contents of all (**ABS**) locations (=SLAs) linked to by bh_patient_episode are listed in Table D.1 of Appendix D.

Patient_Episode (bh_patient_episode) also has look-up tables for **Admission_Type** (bh_admission_type), **Source_Of_Admission** (bh_source_of_admission), **Length Of Stay** (bh_length_of_stay), **Separation_Method** (bh_separation_method) and **Care_Type** (bh_care_type). The contents of these look-up tables are given in Chapter 5.

id	MDCCategory	DRGGroup
1	8	Unrelated OR DRGs
2	9	Error DRGs
3	A	Major procedures where the principal diagnosis may be associated with any MDC
4	B	Diseases and disorders of the nervous system
5	C	Diseases and disorders of the eye
6	D	Diseases and disorders of the ear, nose, mouth and throat
7	E	Diseases and disorders of the respiratory system
8	F	Diseases and disorders of the circulatory system
9	G	Diseases and disorders of the digestive system
10	H	Diseases and disorders of the hepatobiliary system and pancreas
11	I	Diseases and disorders of the musculoskeletal system and connective tissue
12	J	Diseases and disorders of the skin, subcutaneous tissue and breast
13	K	Endocrine, nutritional and metabolic diseases and disorders
14	L	Diseases and disorders of the kidney and urinary tract
15	M	Diseases and disorders of the male reproductive system
16	N	Diseases and disorders of the female reproductive system
17	O	Pregnancy, childbirth and the puerperium
18	P	Newborns and other neonates
19	Q	Diseases and disorders of the blood and blood forming organs and immunological disorders
20	R	Neoplastic disorders (haematological and solid neoplasms)
21	S	Infectious and parasitic diseases
22	T	42
23	U	Mental diseases and disorders
24	V	Alcohol/drug use and alcohol/drug induced organic mental disorders
25	W	Injuries, poisoning and toxic effects of drugs
26	X	42
27	Y	Burns
28	Z	Factors influencing health status and other contacts with health services

CHAPTER 4. INVENTORY OF THE COLLECTION

The **Bendigo Health Hospital** data collection is represented in the repository in **MySQL** database format (`bh_all.sql`) and as **Comma Separated Values (CSV)** exports of the individual tables within that database. Also present in the collection are **XLS** spreadsheets of **ABS** Socio-economic data by Statistical Local Area (**SLA**) (`DRG-Mapping-Table.xlsx`) and **Australian Refined Diagnosis Related Groups (AR-DRG)**s. The **AR-DRG**-diagnosis and **ABS**-location information present in the database was obtained from these two sources. Table 4.1 lists the files present in the repository and Table 4.2 lists the (database look-up table export) files present within the compressed zip archive `exportTables.zip`.

FileName	FileSize	File Description
<i>Database tables</i>		
<code>exportTables.zip</code>	3.5Mb	Compressed zip of select BHH database tables exported in CSV format
<code>bh_all.sql</code>	.5Mb	MySQL dump of select BHH database tables
<i>Auxilliary tables</i>		
<code>DRG-Mapping-Table.xlsx</code>	217K	AR-DRG
<code>ABS.xlsx</code>	2.2M	Australian Bureau of Statistics – Socio-economic data by Statistical Local Area (SLA)
<i>Documentation</i>		
<code>guidelinesForUsingBHData.pdf</code>	571K	Documentation (This file.)

Table 4.1: Files in collection

FileName	FileSize	File Description
bh_abs.csv	614K	Export of [bh_abs] (derived from ingest of ABS.xlsx)
bh_admission_type.csv	291	Export of [bh_admission_type]
bh_care_type.csv	815	Export of [bh_care_type]
bh_drg.csv	74K	Export of [bh_drg] (derived from ingest of DRG-Mapping-Table.xlsx)
bh_drg_group.csv	1.7K	Export of [bh_drg_group] (derived from [bh_drg])
bh_length_of_stay.csv	118	Export of [bh_length_of_stay]
bh_mdc.csv	22	Export of [bh_mdc] (=Major Diagnostic Categories; derived from bh_drg)
bh_schema.csv	6.9K	Export of BendigoHealth database schema
bh_separation_method.csv	669	Export of [bh_separation_method]
bh_sex.csv	63	Export of bh_sex
bh_source_of_admission.csv	607	Export of [bh_source_of_admission]

Table 4.2: Files in exportTables.zip

CHAPTER 5. LOOK-UP TABLES

Following is a listing of the contents of all look-up tables present in the BendigoHealth database collection.

Please refer to these tables in the construction of queries for filtering/selecting records. In brief:

- Table 5.2 details **Admission__Types** referenced (by key) in **Patient__Episode** (bh_admission_type)
- Table 5.3 details **Care__Types** referenced (by key) in **Patient__Episode** (bh_care_type)
- Table 3.2 details **Diagnosis__Groups** referenced (by key) in **Patient__Episode** (bh_drg_group)
- Table 5.4 details **Length Of Stays** referenced (by key) in **Patient__Episode** (bh_length_of_stay)
- Table 5.5 details **Separation__Methods** referenced (by key) in **Patient__Episode** (bh_separation_method)
- Table 5.6 details **Source__Of__Admissions** referenced (by key) in **Patient__Episode** (bh_source_of_admission)
- Table 5.7 details **Sex** referenced (by key) in **Patient__Episode** (bh_sex)

Table 5.1 describes the linking relationships between the main BendigoHealth table and look-up tables.

Table ...	Column	→	Lookup-Table ...	-Col
bh_patient_episode	AdmissionType_id	→	bh_admission_type	id
bh_patient_episode	SourceOfAdmission_id	→	bh_admission_type	id
bh_patient_episode	LengthOfStay_id	→	bh_admission_type	id
bh_patient_episode	CareType_id	→	bh_admission_type	id
bh_patient_episode	SeparationMethod_id	→	bh_admission_type	id
bh_patient_episode	DRGGroup_id	→	bh_drg_group	id
bh_patient_episode	Sex_id	→	bh_Sex	id

Table 5.1: Linking relationships between key tables

Table 5.2: [bh_admission_type]

id	AdmissionTypeCode	AdmissionType
1	11	Admission from waiting list
2	C	Admission from ED
3	M	Maternity
4	O	Other Emergency Admission
5	P	Planned Admission
6	S	Statistical Admission
7	X	Other Planned Admission
8	Y	Birth episode

Table 5.3: [bh_care_type]

id	CareType	CareTypeDescription
1	0	Alcohol and Drug Program
2	1	NHT/Non-Acute
3	2	Designated Rehabilitation Program/Unit: Level 1
4	4	Other care (Acute) including Qualified newborn
5	5A	Approved Mental Health Service or Psycho geriatric Program – Acute, Adult Mental Health Service
6	5E	Approved Mental Health Service or Psycho geriatric Program: – Mental Health Secure Extended Care Unit (SECU)
7	5G	Approved Mental Health Service or Psycho geriatric Program – Acute, Aged Persons Mental Health Service (APMH)
8	6	Designated Rehabilitation Program/Unit: Level 2
9	8	Palliative Care Program
10	9	Geriatric Evaluation and Management Program
11	NSP	Unknown
12	R2	Restorative Care, Offsite
13	U	Unqualified newborn

Table 5.4: [bh_length_of_stay]

CHAPTER 8. QUERYING THE DATA

Following is an example of running a query against the data. ...

```
SELECT
  DRGGroup,
  count(*) AS cntTot
FROM
  bh_patient_episode, bh_drg_group
WHERE
  bh_patient_episode.DRGGroup_id = bh_drg_group.id
GROUP BY
  DRGGroup
ORDER BY
  DRGGroup
```

This will return the number of records in each DRG–category. Results are presented in Table 8.1:

Table 8.1: [bh_example_query]

APPENDIX A. PROCESSING OF RAW DATA

There were 48,215 records in the raw data received from BendigoHealth (BH20052014.xlsx). These records were processed for purposes of de-identification/anonymisation (§1) and data-cleansing (§2) as detailed below (018_BH.py).

§1 Processing for De-identification/anonymisation

Of the 48,215 raw-data records, 7,978 records were excluded or removed for purposes of de-identification / anonymisation leaving 40,237 records for publication. A summary of the progressive count of records left at each step of exclusions/deletions is listed in Table A.1. Details of the steps taken are given in §1.1. After the exclusion/removal of records (filtering), the **AR-DRG**-classification of the remaining 40,237 records was aggregated to the level of **Major Diagnostic Category (MDC)** and all dates were rounded-down to the nearest 5-year value. Details are given in Section §1.1 (See Appendix C for **AR-DRG** classification details.)

Look-up table	Category	No. deleted	No. left
Raw Count	-	0	48,215
Sex	Not M or F	4	48,211
Year of Birth	Not between 1925 - 2005	7740	40,470
DRG-Group	-	79	40,391
AdmissionType	-	83	40,308
SeparationMethod	-	48	40,260
SourceOfAdmission	-	23	40,237

Table A.1: Deleted records by category of deletion

§1.1 Details of steps taken to anonymise data

Filtering

- **Exclusions** The following exclusions were performed on the data:
 - **Sex** checked to confirm patient categorised as either **Female** or **Male**; if not confirmed, record excluded. (4 rows excluded.)
 - **BirthYear** checked to confirm the patient born between 1925 – 2005 inclusive (that is, that s/he was between 15 and 90 years old); if not confirmed, record excluded. (7,744 rows excluded; 40,470 records left.)
- **Removals** A calculation was made of counts of **patient-episode** records by each category of each look-up table – **Diagnosis_Group**, **Admission_Type**, **Care_Type**, **Length Of Stay**, **Separation_Method** and **Source_Of_Admission**. **Patient_Episode** records were deleted where represented in any category having less than 50 records in total (025_DropRecordsWithLowCounts.py). Tables A.2 – A.6 list these categories and their low-count (< 50) aggregates.

Table A.2 : low-count patient-episode record-counts grouped by **Admission_Type**

Table A.3 : low-count patient-episode record-counts grouped by **Care_Type**

3	Contract - Transfer from Transition Care bed based	1
5	Contract - Transfer from Aged Care Residential	1
6	Contract - Transfer from Acute Hosp/Ext Care/Rehab	3
11	Birth episode	10

Aggregation

The following aggregations were performed:

- All dates (= **AdmissionDate**, **BirthYear** and **SeparationDate**) rounded down to the nearest 5-year value using the formula:

$$X = X - (X \bmod 5) \quad (\text{A.1})$$

(where X = (Year of) {**AdmissionDate** | **BirthYear** | **SeparationDate**})

- All **AR-DRG** classification codes replaced by **Major Diagnostic Category (MDC)**. See Appendix C for **AR-DRG** classification details.

§2 Data-cleansing processing

The following data-cleansing processes were performed:

- **Statistical Local Area (SLA)** set to 99999 if not known

- All integer fields (**MechanicalVentilationHours**, **AcuteLOS**, **ICUHours**, **HITH**, **LeaveDays**, **PsychiatricCareDays**) set to NULL if missing; '0' if 'empty'.

§1 Source of ABS socio-economic data

The **Australian Bureau of Statistics (ABS)** provides a wide range of statistics for various standard geographical areas. Of these, the Socio-Economic Indexes for Areas (SEIFA 2011) were obtained free of charge from the ABS website's download page for 2033.0.55.001 – Census of Population and Housing: Socio-Economic Indexes for Areas (SEIFA), Australia, 2011:

<http://www.abs.gov.au/AUSSTATS/abs@.nsf/DetailsPage/2033.0.55.0012011?OpenDocument>

SEIFA 2011 consists of four key socio-economic indices:

- Index of Relative Socio-economic Disadvantage (IRSD)
- Index of Relative Socio-economic Advantage and Disadvantage (IRSAD)
- Index of Education and Occupation (IEO)
- Index of Economic Resources (IER)

These indices are explained in depth in the Socio-Economic Indexes for Areas (SEIFA) 2011 Technical Paper, also available via the above link.

§2 ABS SEIFA Data Acquisition and Preparation

Key ABS socio-economic indicators were located via a search of the ABS website and were downloaded from this page:

<http://www.abs.gov.au/AUSSTATS/abs@.nsf/DetailsPage/2033.0.55.0012011?OpenDocument>

File downloaded:

Statistical Local Area, Indexes, SEIFA 2011 - 2033.0.55.001 sla indexes.xls

SEIFA data used was located in the Table 1 worksheet, which included both the scores and deciles across each of the 4 key socio-economic indices listed above (IRSD, IRSAD, IEO and IER) for each Statistical Local Area.

The SEIFA scores and deciles were added to the MODS data set, based on the SLA column which was used as the data source for a VLOOKUP formula that was used to extract the SEIFA data from the Table 1 worksheet for each SLA represented in the MODS data set.

§1 Definition

The Australian Institute of Health and Welfare define **Australian Refined Diagnosis Related Groups (AR-DRG)** as “*an Australian admitted patient classification system which provides a clinically meaningful way of relating the number and type of patients treated in a hospital . . . to the resources required by the hospital.*”

§2 Sources of information

Two main sources of information were used:

1. Australian Institute of Health and Welfare:
<http://www.aihw.gov.au/hospitals-data/ar-drg-data-cubes/>
2. New Zealand Ministry of Health:
<http://www.health.govt.nz/nz-health-statistics/data-references/diagnosis-related-groups/australian-refined-diagnosis-related-groups-v60x-ar-drg-v60x>

§3 Partitioning of the Code

The **AR-DRG** consists of a 4-character code of the form “**ADD**S”, partitioned as follows:

- A** A single letter representing the **Major Diagnostic Category (MDC)** to which the DRG belongs.
- DD** A two digit code representing the “partition” to which the DRG belongs, falling into one of three ranges:

Range	=	Partition
01 – 39	=	Surgical
40 – 59	=	Other
60 – 99	=	Medical

S A single letter indicating the consumption level demanded by the DRG:

Letter	=	Consumption Level
A	=	highest consumption of resources
B	=	second highest consumption of resources
C	=	third highest consumption of resources
D	=	fourth highest consumption of resources
Z	=	no split for the adjacent DRG

Only the first part (**MDC**) from the original **AR-DRG** codes was used in the final data set to ensure the data was sufficiently de-identified. (Note that in the database **MDC** is represented by `MDCCategory` and is described by `DRGGroup`. See Table 3.2 for details.)

§4 Code Versions

The codes have been published in various versions from 1998 (version 1) until the present (version 7). With each version, new codes have been introduced while some older codes have been removed. Because the date range of the original Bendigo Health data set started from 2004, some of the **AR-DRGs** included no longer existed and definitions for these codes had to be extracted from older versions of the **AR-DRG**, obtained from the New Zealand Ministry of Health site.

APPENDIX D. ABS DATA

Table D.1 lists contents of all 338 (**ABS**) Locations (=SLAs) linked to by **Patient_Episode**.

Table D.1: [bh_abs_tex]

APPENDIX E. LOG OUTPUT FROM DATA PROCESSING

Following is the raw log output of the processes run to generate published data from the raw data as received from BendigoHealth.

```
1 This program (000_CreateModsDB.sh):
  1. DROPs and re-CREATES [mods02]
  2. DROPs and re-CREATES user mods2
5  3. GRANTs mods2 Read-Write access to [mods02].*

Press y to continue (anything else to stop): Database
information_schema
fedora3
10 islandora
  mods02
  mysql
  performance_schema
  symphony
15 test
  test_pymysql
  test_pymysql2
All done. List of databases in above list; [mods02] should be amongst them.
/home/cja/.virtualenvs/mods/lib/python3.4/site-packages/pymysql/cursors.py:134: Warning: Unknown table
'ml_abs'
20 result = self._query(query)
/home/cja/.virtualenvs/mods/lib/python3.4/site-packages/pymysql/cursors.py:134: Warning: Unknown table
'bh_abs'
  result = self._query(query)

This program (001_ABS.py):
25 1. extracts data:
   <dirInMLData>/ABS.xlsx --> [mods02]![ml_abs]

  2. dumps data:
30 [mods02]![ml_abs] --> ml_abs.csv

<dirInMLData> = /opt/repos/bitbucket/mods02/dsML/dataIn
<dirOutMLData> = /opt/repos/bitbucket/mods02/dsML/dataOut

35

Pre-requisites:
-----
Needs to be run twice; second time to include abs-ids not present in ml_patients
40 See # Add missing abs-ids for details
Missing ids found were:
  - 'Unknown-99999',
  - 'ML111-13400',
  - 'Unknown-32666',
45 - 'ML105-10501',
